PROFESSIONAL SUMMARY

Build scalable backend systems and AI-enabled applications using **Spring Boot (Kotlin)**, **ASP.NET Core**, and **Python**.

Design and deploy **microservices** with **Docker**, **Kubernetes**, and **CI and CD (GitHub Actions)** on cloud platforms.

Deliver production-ready **REST APIs** with **JWT** security, **PostgreSQL** data modeling, and performance-focused engineering.

EDUCATION

National University of Computer and Emerging Sciences (FAST-NUCES) Peshawar, PK
Bachelor of Science in Software Engineering Aug 2022 – May 2026 (Expected)

- **Relevant Coursework:** Software Design and Architecture, Data Structures, Database Systems, Operating Systems, Computer Networks, Artificial Intelligence, Design and Analysis of Algorithms.

SKILLS

Backend and API development: Spring Boot (Kotlin), ASP.NET Core, Node.js (Express), REST API design, JWT, Hibernate/JPA

Cloud and DevOps: Kubernetes (Minikube), Docker, Azure App Service, GitHub Actions (CI and CD), Nginx, Linux

AI and Machine Learning: Python, PyTorch, RAG (FAISS), LLMs (Mistral, Gemma), Vision Transformers (ViT), Reinforcement Learning

Mobile and Frontend: Kotlin (Android), Jetpack Compose, MVVM, Hilt DI, Room, Retrofit

Databases: PostgreSQL, MySQL, SQL Server, Redis, SQLite, MongoDB

EXPERIENCE

Software Engineer - ASP.NET Core, Azure (Remote Contract) Nov 2025 – Dec 2025
Event Ticketing System Remote Client Project

- Delivered a production-ready Event Ticketing System using **ASP.NET Core** and **Azure** within a 4-week contract.
- Built **15+ REST API endpoints** for authentication, event management, ticket generation, and user management.
- Implemented **RBAC** and designed **8+ relational tables** in PostgreSQL (Supabase).
- Automated testing and deployment with **GitHub Actions** to Azure App Service.

PROJECTS

SkinSense – AI-Powered Virtual Dermatology System Aug 2025 – Present
Final Year Project GitHub: github.com/MFAIZAN20

- Architected a multimodal AI healthcare platform using **microservices** to analyze skin imagery and symptoms.
- Integrated **BLIP** and fine-tuned **Vision Transformers (ViT)** on dermatology datasets for image captioning and disease classification.
- Built a Retrieval-Augmented Generation (RAG) system with **FAISS** to ground LLM responses in medical corpora.
- Deployed instruction-tuned LLMs (**Mistral**, **Gemma**) as intelligent agents for patient intake and doctor assistance.
- Containerized the microservices suite using **Docker** and orchestrated deployments with **Kubernetes (Minikube)**.

eShop – Multi-Role E-Commerce Ecosystem June 2025 – Aug 2025
Full-Stack E-Commerce Platform github.com/MFAIZAN20/eshop-backend

- Built a secure **Spring Boot (Kotlin)** backend implementing stateless **JWT authentication** with custom filters to enforce RBAC.
- Designed a comprehensive PostgreSQL schema using **JPA** and **Hibernate** for stores, products, orders, and notifications.
- Engineered an end-to-end order lifecycle system with "split-by-store" logic and an event-based audit trail.
- Developed a native Android client using **Jetpack Compose**, **MVVM**, **Hilt DI**, and **Retrofit**.

Loom – AI-Enhanced Social Content Platform

Feb 2025 – May 2025

Social Media Platform

github.com/MFAIZAN20/WebProject_Loom

- Built a Reddit-style social platform with posts, threaded comments, and voting using **PHP** and **MySQL**.
- Optimized MySQL queries and indexing, reducing average query latency by **30%**.
- Integrated a Python ML service to moderate content in real-time with **sub-200ms** latency.

DreamCanvas – Microservices Dream Content Platform

Oct 2025 – Dec 2025

Dockerized Microservices System

github.com/MFAIZAN20/dreamcanvas

- Built a Docker Compose microservices stack with a Node.js (Express) API gateway routing requests to services written in Node.js and Python (Flask).
- Implemented PostgreSQL persistence and schema for dream entries and Redis-backed services for caching and notifications.
- Added resilient service communication with proxy timeouts, health endpoints, and graceful fallbacks when database connectivity is unavailable.

DevOpsProject – DreamCanvas on Kubernetes

Dec 2025

Kubernetes Deployment (Minikube)

github.com/MFAIZAN20/DevOpsProject

- Deployed the DreamCanvas stack on Minikube using Kubernetes Deployments, Services, StatefulSets, ConfigMaps, Secrets, and PersistentVolumeClaims.
- Configured Nginx Ingress routing for a local host and service paths across the API gateway and microservices.
- Provisioned PostgreSQL and Redis workloads and validated rollouts using kubectl and health checks.

ToDoList – Android Task Manager

Mar 2025

Android Application

github.com/MFAIZAN20/ToDoList

- Built an Android task manager with signup, login, and per-user task lists using RecyclerView and view binding.
- Integrated a REST backend via Retrofit to create, fetch, and delete tasks.
- Integrated Firebase Analytics and Crashlytics for app telemetry and crash reporting.

Additional Projects

- Competitive Programming: C++ solutions and practice for data structures and algorithms.

LEADERSHIP AND ACTIVITIES

Aspire University Leader

Selected for a competitive global leadership program; contributed to organizing student initiatives and chapter activities.
