

Muhammad Faizan

Backend Software Engineer (Undergraduate) | ASP.NET Core, Spring Boot, Python | Docker/Kubernetes | Azure
Peshawar, Pakistan (UTC+5) | Open to Remote | +92 317-9911790 | mfkhalil683@gmail.com | github.com/MFAIZAN20

SUMMARY

Backend-focused Software Engineering undergraduate shipping production-ready APIs and multi-service systems. Strong in REST API design, JWT authentication and role-based access control (RBAC), relational database modeling, and CI/CD-driven cloud deployments.

SKILLS

Languages: C#, Kotlin, Python, Java, SQL, JavaScript, PHP, C++, Bash

Backend: ASP.NET Core Web API, Spring Boot, Spring Security, REST, JWT auth, RBAC, microservices

Databases: PostgreSQL, MySQL, SQL Server, SQLite, Firebase (schema design, indexing, query tuning)

Cloud/DevOps: Azure App Service, GitHub Actions (CI/CD), Docker, Kubernetes (Minikube), Linux

ML/AI (FYP): Transformers, vision models (ViT/BLIP), RAG, FAISS, Sentence Transformers/BGE, BM25, reranking

EXPERIENCE

Software Engineer (Client Project) --- Event Ticketing System (Remote) | Nov 2025 -- Dec 2025

- Delivered a production-ready ticketing backend in a 4-week engagement; implemented 15+ REST endpoints and secured workflows with JWT auth + RBAC (Admin/Organizer/Attendee).
- Designed PostgreSQL schema (8+ tables) for transactional workflows; added constraints and indexes for reliability and performance.
- Built GitHub Actions CI/CD to Azure App Service (build/test/deploy); shipped PDF ticket generation, QR check-in, and structured logging.
- Validated the system with 100+ QR scan tests and delivered deployment/runbook documentation for handoff.

PROJECTS

SkinSense --- AI-Powered Virtual Dermatology Decision Support (Final Year Project) | Aug 2025 -- Present

- Building a multimodal pipeline (skin images + symptom text) that asks follow-up questions and generates grounded, structured clinical summaries and severity guidance (decision support; non-diagnostic).
- Implementing advanced RAG over medical corpora: hybrid retrieval (BM25 + dense embeddings), FAISS indexing, and neural reranking to ground outputs.
- Prototyping severity triage (mild/moderate/severe/urgent) with bandit-style reinforcement learning and reward signals for triage correctness.

EShop --- Multi-Role E-Commerce Platform | 2025 | eshop-backend, eshop-frontend

- Built a Spring Boot backend (accounts, carts, orders, products, stores, reviews, promotions, notifications) with JWT authentication and RBAC for customer/store owner/driver roles.
- Developed an Android app in Jetpack Compose (MVVM, Hilt, Retrofit, Room) supporting customer/store owner/driver experiences, including Maps-enabled delivery flows.

DreamCanvas --- Microservices + Kubernetes Deployment | 2025 | dreamcanvas, k8s

- Designed an API gateway + 9 microservices (Node.js/Express + Flask) with PostgreSQL persistence and Redis-backed caching/notifications.
- Containerized services and deployed to Minikube using Deployments, Services, Ingress, ConfigMaps, Secrets, StatefulSets, and PVCs.

Loom --- AI-Enhanced Social Content Platform | Feb 2025 -- May 2025

- Built a Reddit-style platform (posts, comments, voting, moderation) with authentication and user roles; designed a MySQL schema (10+ tables) with indexes.
- Integrated a Python ML service for real-time content quality scoring and moderation signals.

Additional Projects: Real-Time Weather (Android), TodoList (Kotlin + Flask + Firebase), Influx (C++ OOP)

EDUCATION

FAST National University of Computer and Emerging Sciences (FAST-NUCES) --- Peshawar, Pakistan

BS Software Engineering | Aug 2022 -- May 2026 (Expected)

LEADERSHIP

Aspire University Leader --- Selected for a competitive global leadership program; contributed to establishing the Aspire student chapter at FAST-NUCES.
